

Global Issues in Context (GIC) and Global Reference on the Environment, Energy and Natural Resources (GREENR)

Highly complementary

- **GIC** covers international topics and events, **GREENR** covers environmental issues – libraries can benefit from this expansive coverage.
- **GIC** includes environmental topics (e.g. climate change), but **GREENR** is the springboard to broader discovery about environmental issues.

Knowledge portals

- The look, feel, and functionality is shared.

Issues based

- Both cover issues and use portal pages to organize content – great continuity of experience across both products.

Minimal overlap

- Roughly 5% of topics and 15% of content is shared (for complete information contact your Gale Representative at 1-800-877-GALE or visit www.gale.com)
