

Page numbers in **boldface** refer to the main entry on the subject. Page numbers in *italics* refer to illustrations. References to figures and tables are denoted by *f* and *t*.

## A

A Toroidal LHC Apparatus. *See* ATLAS

Abelson, Philip, 311

ABF (asymmetric *B* factory), 56

Académie des Sciences, 339

Accelerator physics, 264

Accelerators, **1–5**

acceleration system in, 3

circular, 2–3, 63, 198–199, 198*f*,

291–292 (*see also* Synchrotrons)

early, **21–25** (*see also specific accelerators and laboratories*)

energies attainable in, 1, 1

extraction of beams from, 4–5

Fermilab, 1 (*see also* Fermilab)

final use systems in, 4–5

funding for, 266

injectors in (*see* Injector systems)

medical applications of, 69, 290, 437

orbit control system in, 4

phase transitions in, 367

rf quadrupole, 291

types, 1–3

*see also specific accelerators and laboratories*

Accelerators, colliding beams: electron-positron, **5–12**, 174

ADONE, 10

asymmetrical, 9–10

beam-beam interaction in, 9

choice of particles for, 6–7

Cornell Electron Storage Ring, 8, 9

(*see also* Cornell Electron Storage Ring)

cross section in, 6

energy from, 10–11, 11*f*

event rate in, 6

injection/storage in, 7–8

intensity limitations of, 9

interaction points in, 6, 8

invention of, 17

JLC, 12, 500

Large Electron Positron Collider, 10, 11

linear, 11–12

luminosity of, 6, 9–10, 10*t*

major, 10–11, 10*t*

NLC, 12, 500

particle sources for, 7

PETRA, 11

physics results from, 10–11, 11*f*

rest energies of selected particles in, 5, 6*t*

SLAC, 11–12 (*see also* SLAC)

Stanford Linear Collider, 11–12, 434, 436

Stanford Positron Electron Asymmetric Ring, 11, 18–19

storage rings in, 6, 7–9, 7*f*

synchrotron radiation from, 9

TESLA, 12, 169, 500

*see also specific accelerators and laboratories*

Accelerators, colliding beams: electron-proton, **12–16**, 174

benefits of, 13

features of, 13–15

Hadron Electron Ring Accelerator,

14–16, 15*f* (*see also* Hadron Electron Ring Accelerator)

for high-energy research, 12–13

Large Hadron Collider, 13, 15, 17*f*, 18

options for/properties of, 13, 13*t*, 14*f* selected, 13*t*

*see also specific accelerators and laboratories*

Accelerators, colliding beams: hadron, **3**, **16–21**

Alternating Gradient Synchrotron, 19

beam stacking in, 18

bigger colliders, 19–20

and center-of-mass energy, 219–220

Colliding Beam Accelerator, 19

Fermilab, 19 (*see also* Fermilab)

*vs.* fixed-target accelerators, 16–18, 26–27

hadrons, definition of, 16

Intersecting Storage Rings, 17*f*, 18

Large Electron Positron Collider, 20

Large Hadron Collider, 13, 15, 17*f*, 18–20

proton-antiproton, 18–19

Proton synchrotron, 18

Relativistic Heavy Ion Collider, 20

selected, 21*t*

SSC, 19–20

*see also* Tevatron; specific accelerators and laboratories

Accelerators, fixed-target: electron, **2**, **25–30**, 174–175

acceptance detection in, 28–29

CEBAF, 29, 29*f*

*vs.* colliders, 16–18, 26–27

Electron Stretcher Accelerator, 29

existing facilities, 29–30

for HERMES experiment, 29

high duty factor in, 28

luminosity in, 28–29

- Mainz Microtron, 29
