

U·X·L® SCIENCE CD

The science CD that's written specifically for students and patrons!

Now you can take your students and patrons to a new level in the study of science with the new *U·X·L Science CD*. Created specifically for student use, this CD thoroughly covers 3,000 scientific topics.

FAST, FUN AND AFFORDABLE

U·X·L Science CD provides current and complete information on science topics in the news today, plus full coverage of traditional science subjects, including physical sciences, social sciences, earth and life sciences, math, engineering and environmental sciences.

What's more, this multimedia tool is very affordable. You'll get more of what students find enjoyable in CDs, as well as what's important to librarians and teachers — dependable, current information that's useful across the curriculum.

The attractive main menu invites students to access entries by scrolling the database, selecting a scientific field of study, entering a scientist's name or searching a timeline. Students may also create specialized searches by entering key words or phrases in a unique and student-friendly "What do you want to know?" text box. For example, a student can key in the question, "What makes thunder so loud?" and they'll instantly have access to every entry within the database that has information relating to this question.

STUDENT-FRIENDLY FEATURES ADD VALUE

You'll find many exciting features on this CD, including:

- An easy-to-use graphical interface that allows students and patrons to independently browse the database or quickly zero in on a specific topic

NEW RELEASE

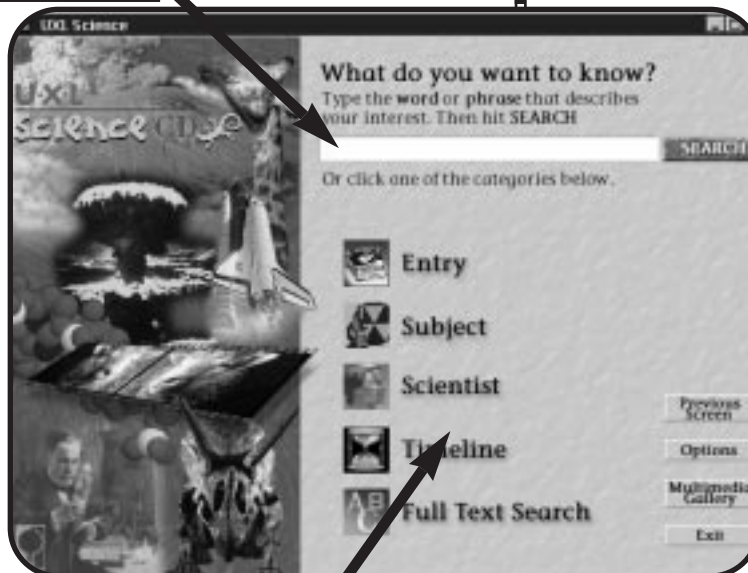

- 3,000 encyclopedic, biographic and chronology entries, written in nontechnical language, covering all aspects of science
 - More than 1,500 illustrations and photos to help students visualize the people and concepts involved in the study of science
- 12 video and animation clips that make science come alive
- A glossary of scientific terms
- A 32-page teacher's guide with sample assignments and project suggestions to help integrate the CD into classroom projects
- Print and save to diskette capabilities

COVERS A WIDE VARIETY OF SCIENTIFIC SUBJECTS

Subjects covered on the CD include:

- Aerodynamics
- Bacteria
- Comets
- Dioxin
- Electricity
