Frankenstein’s monster may be the most famous creature in the world. This terrifying thing is almost human, but not quite. A scientist created him from the spare parts of dead people and then gave him life!

When most people think about Frankenstein’s monster, they think about his most famous appearance, in a movie made in 1931. This movie, "Frankenstein," made the monster a familiar figure. Many fans think the film is one of the best horror movies ever made. It is still a beloved story, even though it does not seem very scary compared to other movies.

In this movie, the monster is about 7 feet (2m) tall, with broad shoulders and long, strong arms and legs.
